ASPECTS OF COMBINATORICS AND COMBINATORIAL NUMBER THEORY

CRC Press, Florida, 2002, 156pp.

Table of Contents

Notations and Terminologies

Chapter 1: Classical Ramsey-Type Theorems

Chapter 2: Van Der Waerden Revisited

Chapter 3: Generalizations of Schur's Theorem

Chapter 4: Topological Methods

Chapter 5: Euclidean Ramsey Theory

Chapter 6: Additive Number Theory and Related Questions

Chapter 7: Partitions of Integers

Chapter 8: Ramsey-Type Results in Posets

Solutions to Selected Exercises

Bibliography

Index

Charalambos A. Charalambides

ENUMERATIVE COMBINATORICS

Chapman & Hall/CRC, New York, 2002, 609pp.

Table of Contents

Preface

Chapter 1: Basic Counting Principles

Chapter 2: Permutations and Combinations

Chapter 3: Factorials, Binomial and Multinomial Coefficients

Chapter 4: The Principle of Inclusion and Exclusion

Chapter 5: Permutations with Fixed Points and Successions

Chapter 6: Generating Functions

Chapter 7: Recurrence Relations

Chapter 8: Stirling Numbers

0012-365X/03/\$ - see front matter

doi:10.1016/S0012-365X(03)00015-3

Chapter 9: Distributions and Occupancy
Chapter 10: Partitions of Integers
Chapter 11: Partition Polynomials
Chapter 12: Cycles of Permutations
Chapter 13: Equivalence Classes
Chapter 14: Runs of Permutations and Eulerian Numbers
Hints and Answers to Exercises

RANDOM GRAPHS
John Wiley & Sons, New York, 2000, 333pp.

Table of Contents

Preface
Chapter 1: Preliminaries
Chapter 2: Exponentially Small Probabilities
Chapter 3: Small Subgraphs
Chapter 4: Matchings
Chapter 5: The Phase Transition
Chapter 6: Asymptotic Distributions
Chapter 7: The Chromatic Number
Chapter 8: Extremal and Ramsey Properties
Chapter 9: Random Regular Graphs
Chapter 10: Zero-One Laws
References
Index of Notation
Index

Mohamed A. Khamisi, William A. Kirk
AN INTRODUCTION TO METRIC SPACES AND FIXED POINT THEORY
John Wiley & Sons Inc., New York, 2001, 302pp.

Table of Contents

Preface
I. Metric Spaces
Chapter 1: Introduction
Chapter 2: Metric Spaces
Chapter 3: Metric Contraction Principles
Chapter 4: Hyperconvex Spaces
Chapter 5: “Normal” Structures in Metric Spaces

II. Banach Spaces

Chapter 6: Banach Spaces: An Introduction
Chapter 7: Continuous Mappings in Banach Spaces
Chapter 8: Metric Fixed Point Theory
Chapter 9: Banach Space Ultrapowers
Appendix: Set Theory
Bibliography

ALGEBRAIC COMBINATORICS ON WORDS

Cambridge University Press, 2002, 504pp.

Table of Contents

Preface
Chapter 1: Finite and Infinite Words
Chapter 2: Sturmian Words
Chapter 3: Unavoidable Patterns
Chapter 4: Sesquipowers
Chapter 5: The Plastic Monoid
Chapter 6: Codes
Chapter 7: Numeration Systems
Chapter 8: Periodicity
Chapter 9: Centralizers of Noncommutative Series and Polynomials
Chapter 10: Transformations on Words and q-Calculus
Chapter 11: Statistics on Permutations and Words
Chapter 12: Makanin's Algorithm
Chapter 13: Independent Sets of Equations

CRYPTOGRAPHY: THEORY AND PRACTICE

Chapman & Hall/CRC, Florida, 2002, 360pp.

Table of Contents

Chapter 1: Cryptography
Chapter 2: Shannon's Theory
Chapter 3: Block Ciphers and the Advanced Encryption Standard
Chapter 4: Cryptographic Hash Functions
Chapter 5: The RSA Cryptosystem and Factoring Integers

Chapter 6: Public-Key Cryptography Based on the Discrete Logarithm Problem

Chapter 7: Signature Schemes

MAGIC GRAPHS

Birkhauser, Boston, MA, 2001, 146pp.

Table of contents

Preface

List of Figures

1. Preliminaries

- 1.1. Magic
- 1.2. Graphs
- 1.3. Labelings
- 1.4. Magic labeling
- 1.5. Some applications of magic labelings

2. Edge-Magic Total Labelings

- 2.1. Basic ideas
- 2.2. Graphs with no edge-magic total labeling
- 2.3. Cliques and complete graphs
- 2.4. Cycles
- 2.5. Complete bipartite graphs
- 2.6. Wheels
- 2.7. Trees
- 2.8. Disconnected graphs
- 2.9. Strong edge-magic total labelings
- 2.10. Edge-magic injections

3. Vertex-Magic Total Labelings

- 3.1. Basic ideas
- 3.2. Regular graphs
- 3.3. Cycles and paths
- 3.4. Vertex-magic total labelings of wheels
- 3.5. Vertex-magic total labelings of complete bipartite graphs
- 3.6. Graphs with vertices of degree one
- 3.7. The complete graphs
- 3.8. Disconnected graphs
- 3.9. Vertex-magic injections

4. Totally Magic Labelings

- 4.1. Basic ideas
- 4.2. Isolates and stars
- 4.3. Forbidden configurations
- 4.4. Unions of triangles
- 4.5. Small graphs
- 4.6. Totally magic injections

Notes on the Research Problems

FUNDAMENTALS OF MATRIX COMPUTATIONS, 2ND EDITION
Wiley Interscience, John Wiley & Sons, Inc., New York, 2002, 618pp.

Table of Contents

Preface

Acknowledgements

Chapter 1: Gaussian Elimination and Its Variants

Chapter 2: Sensitivity of Linear Systems

Chapter 3: The Least Squares Problem

Chapter 4: The Singular Value Decomposition

Chapter 5: Eigenvalues and Eigenvectors I

Chapter 6: Eigenvalues and Eigenvectors II

Chapter 7: Iterative Methods for Linear Systems

Appendix: Some Sources of Software for Matrix Computations

INTRODUCTION TO GRAPH THEORY

Prentice Hall, Inc., Upper Saddle River, NJ, 2001, 588pp.

Table of Contents

Preface

Chapter 1: **Fundamental Concepts**

1.1. What is a Graph?

1.2. Paths, Cycles, and Trails

1.3. Vertex Degrees and Counting

1.4. Directed Graphs

- Chapter 2: **Trees and Distance**
- 2.1. Basic Properties
 - 2.2. Spanning Trees and Enumeration
 - 2.3. Optimization of Trees
- Chapter 3: **Matchings and Factors**
- 3.1. Matchings and Covers
 - 3.2. Algorithms and Applications
 - 3.3. Matchings in General Graphs
- Chapter 4: **Connectivity and Paths**
- 4.1. Cuts and Connectivity
 - 4.2. k -connected Graphs
 - 4.3. Network Flow Problems
- Chapter 5: **Coloring of Graphs**
- 5.1. Vertex Colorings and Upper Bounds
 - 5.2. Structure of k -chromatic Graphs
 - 5.3. Enumerative Aspects
- Chapter 6: **Planar Graphs**
- 6.1. Embeddings and Euler's Formula
 - 6.2. Characterization of Planar Graphs
 - 6.3. Parameters of Planarity
- Chapter 7: **Edges and Cycles**
- 7.1. Line Graphs and Edge-coloring
 - 7.2. Hamiltonian Cycles
 - 7.3. Planarity, Coloring, and Cycles
- Chapter 8: **Additional Topics (optional)**
- 8.1. Perfect Graphs
 - 8.2. Matroids
 - 8.3. Ramsey Theory
 - 8.4. More Extremal Problems
 - 8.5. Random Graphs
 - 8.6. Eigenvalues of Graphs
- Appendix A: Mathematical Background
- Appendix B: Optimization and Complexity
- Appendix C: Hints for Selected Exercises
- Appendix D: Glossary of Terms
- Appendix E: Supplemental Readings
- Appendix F: References
- Author Index
- Subject Index
